Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 11, 18 and 19 all recite the limitations, "the electrical device", "the gradient echo pulse" and "the DANTE pulse sequence" all in lines 1. There is insufficient antecedent basis for this limitation in the claim.

Claims 11, 18 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10, and 12-40 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Pines(U.S.Pat.6,426,058). Pines discloses an enhancement of NMR and MRI in the presence of a hyperpolarized noble gas using a low field such as helium or xenon that uses the traditional pulse sequences claimed such as EPI or spin-echo in the presence of gradient fields, in vivo or in vitro, that shows all the features of the claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pines in view of (Werne U.S.Pat.5,744,958). Pines does not show a pace maker being imaged with the patient. Werne discloses an instrument having ultra thin conductive coating and method for a magnetic resonance imaging system that shows imaging a patient with a pacemaker. It would be obvious to one of ordinary skill in the art at the time of the claimed invention to use a pacemaker with the patient while imaging the patient so as to conduct a MRT or magnetic resonance therapy.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hasson, Wiggins, and Hoffmann are cited to show structure and methods similar to the claimed invention.
